Professional Profile

Mr. Antony Prince is an internationally acclaimed maritime leader, naval architect, and marine engineering consultant whose distinguished career spans more than five decades across Japan, India, China, Korea, Singapore, Europe, Canada, and the Bahamas. Widely respected for his visionary leadership in ship design, engineering innovation, and maritime consultancy, he has played a transformative role in strengthening global shipbuilding practices while advancing India's emergence as a centre for indigenous maritime design and engineering excellence.

Currently serving as President & CEO of [Smart Engineering & Design Solutions Ltd.](#) (SEDS), Kochi, India, Mr. Prince is also President of GTR Campbell Marine Consultants Ltd. and Algoship Designers Ltd., Nassau, Bahamas. Through his leadership, these organisations have become globally recognised for delivering technically sophisticated, commercially viable, and internationally benchmarked ship design solutions for both commercial and defence sectors.

A firm believer in Mahatma Gandhi's philosophy, "*You must be the change you want to see in the world,*" Mr. Prince has consistently demonstrated how vision, discipline, and integrity can reshape industries and empower future generations. His professional journey reflects a lifelong commitment to technological excellence, workforce development, and sustainable maritime innovation.

Early Life and International Foundation

A native of Kochi, Kerala, Mr. Antony Prince graduated in Mechanical Engineering from TKM College of Engineering in 1968. Inspired by India's post-independence

industrial aspirations and guided by an unwavering determination to contribute to nation-building, he began his professional journey in the maritime sector at a time when industrial opportunities in India remained limited.

Recognising the immense potential of the global maritime industry, he joined the shipping profession and gained practical engineering experience at sea before embarking on a defining international career path in Japan. In 1972, Mr. Prince joined GTR Campbell in Japan under the mentorship of the legendary naval architect George T.R. Campbell, a pioneering force behind Japan's post-war shipbuilding transformation.

Over a period of nearly 17 years in Japan, he acquired extensive expertise in advanced shipbuilding methodologies, precision engineering, structured production systems, and modern naval architecture. This formative period profoundly shaped his professional philosophy—instilling values of technical excellence, disciplined planning, operational precision, and uncompromising integrity.

Global Maritime Leadership and Ship Design Excellence

Mr. Prince's exceptional technical capability and strategic vision earned him progressive leadership responsibilities within GTR Campbell, culminating in his appointment as President of GTR Campbell International Ltd., Nassau, Bahamas, in 1989. Significantly, he became the first and only Indian—and among the few Asians—to lead this internationally respected maritime organisation.

Under his stewardship, GTR Campbell Marine Consultants has played a vital role in the successful design and construction of more than **150 vessels worldwide**, serving shipowners, shipyards, and maritime stakeholders across multiple continents. These vessels span a broad spectrum of categories, including:

- Bulk carriers
- Multi-purpose vessels (MPVs)
- Passenger vessels
- Tankers
- Offshore support vessels
- Naval and Coast Guard vessels
- Specialised research and service ships

Several vessels developed under his leadership have received international recognition, including being honoured among the “**Significant Ships of the Year**” by the Royal Institution of Naval Architects (RINA), United Kingdom—an acknowledgement of engineering excellence and innovation in global ship design.

Known for integrating engineering precision with commercial practicality, Mr. Prince has consistently transformed highly complex maritime requirements into efficient, buildable, cost-effective, and future-ready ship designs.

Pioneering Innovation in Ship Design

One of Mr. Prince's landmark achievements came in the 1990s with the development of the innovative **“Fantasy – Ship of the Future”** concept. This revolutionary approach redefined the 20,000–30,000 DWT handy-size bulk carrier segment through enhanced efficiency, optimised production methodologies, and standardised high-performance design principles.

His strategic foresight anticipated the global maritime industry's transition toward series shipbuilding, enabling improved cost competitiveness and operational efficiency. The success of these concepts further strengthened the international reputation of GTR Campbell and reinforced Mr. Prince's standing as a visionary maritime designer.

Contribution to India's Shipbuilding Renaissance

Despite his international accomplishments, Mr. Prince remained deeply committed to strengthening India's maritime ecosystem.

In 2003, he facilitated the placement of **six export bulk carrier orders at Cochin Shipyard Limited** and **four export vessel orders at Hindustan Shipyard Limited, Visakhapatnam**. This achievement represented a significant milestone in India's emergence as a competitive global shipbuilding nation and contributed to strengthening confidence in Indian shipbuilding capabilities.

His close professional collaboration with maritime leaders and shipyards played an instrumental role in elevating India's reputation for delivering internationally competitive commercial vessels.

Building Indigenous Capability: Smart Engineering & Design Solutions (SEDS)

Driven by a long-term vision to establish strong indigenous maritime design capability, Mr. Prince founded [Smart Engineering & Design Solutions Ltd.](#) (SEDS) in 2007 in Kochi, India.

At a time when advanced ship design capabilities in India remained limited, SEDS emerged under his leadership as one of the country's most respected maritime engineering and ship design organisations.

Today, SEDS delivers comprehensive engineering and consultancy services across commercial, defence, and specialised vessel categories. Major programmes include:

- Fast Patrol Vessels
- Passenger Vessels
- 37,500 DWT Bulk Carriers
- Buoy Tenders
- Hybrid Ferries
- Anti-Submarine Warfare (ASW) Shallow Watercraft
- Fleet Support Vessels
- 7,500 DWT Hybrid Multi-Purpose Vessels
- Forward Accommodation MPVs
- Coastal Research Vessels

The organisation possesses advanced in-house technical capabilities including:

- Computational Fluid Dynamics (CFD)
- Finite Element Analysis (FEA)
- Noise & Vibration Prediction
- Electromagnetic Interference (EMI) Analysis
- Digital Engineering Coordination
- Retrofit Engineering Solutions

These capabilities position SEDS as a trusted technical partner for both commercial shipping and national defence programmes.

Leadership in Human Capital Development

Beyond engineering excellence, one of Mr. Prince's most enduring contributions has been the development of human capital in India's maritime sector.

Through SEDS, he has mentored and trained **more than 500 engineers**, many of whom now serve in leading shipyards, defence establishments, classification societies, and global marine design organisations.

His vision—“**Design in India; Make in India**”—has contributed meaningfully to strengthening indigenous technical capability and aligns closely with India's national initiatives for self-reliance in advanced engineering and maritime technology.

Professional Memberships and Leadership Roles

Mr. Antony Prince actively contributes to maritime policy, industry advancement, and professional excellence through several prestigious leadership and advisory positions:

- **Advisor** – India Ship Technology Centre
- **President & Founding President** – Indian Marine Designers Association
- **Fellow** – Institute of Marine Engineers India
- **Fellow** – Royal Institution of Naval Architects, UK
- **Honorary Fellow** – Indian Institute of Naval Architects
- **Member** – Society of Naval Architects and Marine Engineers, USA
- **Member** – ABS Council
- **Member** – ABS Board of Managers
- **Former Member** – Board of Governors, Kerala Maritime Society, Government of Kerala
- **Former Member** – Sectorial Innovation Council, Ministry of Shipping, Government of India
- **Trustee & Founding President** – Pravasi Conclave Trust, Kochi

Professional Experience Summary

President & CEO (2013 – Present)

Smart Engineering & Design Solutions (India) Private Limited, Kochi, India

President & CEO (2007 – Present)

Smart Engineering & Design Solutions Ltd., Nassau, Bahamas / Kochi, India

President (1999 – Present)

GTR Campbell Marine Consultants Ltd., Nassau, Bahamas

President (1994 – Present)

Algoship Designers Ltd., Nassau, Bahamas

President (1994 – 1999)

GTR Campbell Marine Consultants Ltd., Montreal, Canada

President (1989 – 1993)

GTR Campbell International Ltd., Nassau, Bahamas

Marine Engineer to Chief Engineer (1972 – 1977)

Dockendale Shipping Co., Nassau, Bahamas

Marine Engineer to Second Engineer (1968 – 1972)

Shipping Corporation of India

Leadership Philosophy and Legacy

Mr. Antony Prince's professional journey represents far more than a distinguished maritime career—it reflects an enduring commitment to excellence, innovation, mentorship, and nation-building.

Through humility, disciplined engineering, and visionary leadership, he has contributed significantly to shaping modern ship design while empowering India's maritime ecosystem to compete on the global stage. His legacy extends beyond vessels and institutions; it is reflected in the hundreds of engineers he has mentored and the confidence he has inspired in indigenous maritime capability.

Even after more than five decades of professional achievement, Mr. Prince continues to lead with remarkable energy, guided by a simple yet profound philosophy:

“Never stop learning, aim beyond perfection, and move forward with integrity.”

Today, he remains a respected global maritime statesman, continuing to shape the future of ship design, engineering excellence, and India's maritime aspirations.
